RE: Choose the Best and Safest Remediation for the Waste Pits

Dear Mr. Miller,

I would like to add my voice to the discussion about the remediation options for the San Jacinto River Waste Pits. As the Army Corps of Engineers study reported, it is much safer to place a permanent cap on the waste pits and to keep everything those toxic materials out of the river. The dig and haul remediation method is simply too risky and could prove disastrous for East Harris County.

Sincerely,

(b) (6)
